LABOR FORCE IN IDAHO

1985 – 1990

THE LABOR FORCE IN IDAHO

SECTION I. THE STATE OF IDAHO
SECTION II. BY COUNTIES
SECTION III. BY MULTI-COUNTY LABOR MARKET AREAS

DEPARTMENT OF EMPLOYMENT
STATE OF IDAHO
CONNIE RYALS, DIRECTOR

Prepared by the
RESEARCH AND ANALYSIS BUREAU

INTRODUCTION

On the following pages area estimates of employment, unemployment, labor force, and the unemployment rate for all counties, labor market areas, and the State of Idaho. Each series is published by month for years 1985 through 1990. These series have been compiled in response to the many requests for labor force information. This publication replaces the previous Labor Force in Idaho publication for these years.

Beginning in January 1989, the Department of Employment shifted to a new method of calculating monthly employment and unemployment data. The previous building block method of estimation was replaced with a regression model that yields more precise estimates. Idaho's labor force data series has been revised using the new methodology back through 1978. This publication contains labor force data using the new methodology. Data in this publication is subject to revision and the final labor force data will be available in subsequent Labor Force in Idaho publications.

Questions on the change in methodology may be directed to the Research and Analysis Bureau, Idaho Department of Employment, 317 Main Street, Boise, Idaho 83735 or call (208) 334-6168.

DEFINITIONS

Employment is made up of all wage and salary workers (including domestics and other private household workers), self-employed persons, and unpaid family workers who worked 15 hours or more during the survey week in family-operated enterprises. Employment in both agricultural and nonagricultural industries is included. Also included are persons temporarily absent from work because of illness, bad weather, vacations, labor-management disputes, or because they were taking time off for various other reasons, even if they were not paid by their employers for the time off. Employed persons holding more than one job are counted only once. Commuters area shown at their place of residence and not at their place of work.

Unemployment includes all persons who did not work during the survey week, who make specific efforts to find a job, and who were able and available for work during the survey week. Also included as unemployed are those who were waiting to be called back to a job from which they had been laid off.

The **Civilian Labor Force** is the total of all civilians classified as employed or unemployed in accordance with the criteria described above.

The **Unemployment Rate** represents the number of unemployed as a percent of the civilian labor force.

The **Survey Week** is the week including the 12th of the month.

Seasonal Adjustment refers to the correction of an economic time series for regularly recurring seasonal movement which can be estimated on the basis of past experience. By eliminating that part of the change which can be ascribed the usual seasonal variations, it is possible to observe the cyclical and other nonseasonal movements in the series. However, in evaluating deviations from the seasonal pattern - it is important to note that seasonal adjustment is merely an approximation based on past experience. Seasonally adjusted estimates have a broader margin of possible error than the original data on which they are based, since they are subject not only to sampling and other errors but, in addition, are affected by the uncertainties of the seasonal adjustment process itself. In the following pages data that have been seasonally adjusted are labeled "adjusted'; raw data are labeled "unadjusted."
